

DB 300 ACCESSORIES

(Designed to extend performance and capabilities)

TRANSPARENCY ILLUMINATOR

TI 300 Transparency Illuminator — For use with transparencies and 35mm slides, the TI 300 provides a back-lighting source for transparency projection mounted on the diffusion glass (see page 10). A special slide holder adapter allows the projection of 35mm slides to over 30 times enlargement on a vertical surface.

CURTAIN ENCLOSURE

CA 300 Curtain Assembly — For those artists who must share studio space, the CA 300 Curtain Assembly creates a darkroom effect on the drawing board by easily attaching to the projector and surrounding the work area. The darkroom environment allows clearer, crisper images which may otherwise distort from ambient lighting.

EXTRA RANGE ADAPTER

ER 300 Extra Range Adapter — Permits greater scale enlargement (up to nine times) of small artwork (2" x 2") or 35mm slides onto the table surface. (Projecting slides requires the TI 300 Illuminator or other back-lighting source.) The ER 300 includes a 3" f/2.5 lens, a 35mm slide and opaque copy holder, a 2" x 2" copyboard and a foam light baffle.
