

Fig. 4

## CONE LOCKING KNOB

Enclosed with your DB 300 is a Cone Locking Knob (see page 6, figure 3). The tightening of this knob prevents undesired movement of the lamp housing when used on a slanted drawing board.

**CAUTION:** Be sure Cone Locking Knob is disengaged before attempting to swivel lamp housing.

## OBJECT PROJECTION

Small three-dimensional objects can be projected by placing them on the copyboard carriage in front of the copyboard or with the copyboard hinged back to the horizontal.

**CAUTION:** Never project items such as aerosol cans (empty or full) or any other volatile items, or items subject to heat damage.

## MIRROR CARE

The DB 300 incorporates front surface silvered mirrors to avoid double imaging. Special care must be taken to avoid scratching the silver finish. If cleaning becomes necessary use clear water or a very mild solution of water and dishwashing detergent and a soft cloth or tissue. **DO NOT SCRUB.**
