

PROJECTION TO THE FLOOR

To project to the floor, loosen the cone locking knob and swing the lamp house out over the floor.

CAUTION: Take extreme care that your drawing board is sufficiently strong to hold the projector in this position without tipping.

HORIZONTAL PROJECTION (Fig. 6)

To project to the wall (or other vertical surface):

1. Unplug power cord.
2. Raise column to its highest position and lock.
3. Loosen cone locking knob.

4. Carefully lift lamp housing off cone. Turn lamp house so that the lens faces the wall and the large end of the tapered hole in the aluminum base points downward.
5. Lower lamp house onto cone and lock in position.
6. Plug in power cord.

ILLUMINATION

The standard illumination of the DB 300 is 300W generated by two No. 106-006 150W enlarger lamps (PH-212). These lamps will provide the required illumination for normal utilization.
